Education

University of Florida

August 2024 – May 2028

B.S. in Computer Science (BSCS)

Gainesville, FL

GPA: 3.98 / 4.00

Relevant Coursework: Data Structures and Algorithms, Operating Systems, Computer Architecture, Software Engineering, Programming Fundamentals 2, Linear Algebra, Statistics, Engineering Economics

Work Experience

Founder & Web Developer

July 2026 – Present

Vidhya Visuals (Florida LLC, in registration)

Gainesville, FL

- Shipped and deployed custom sites for 2 clients on Netlify with GitHub CI, configuring DNS, SSL, and domain transfers end to end.
- Delivered a 7-page custom HTML/CSS/JS site for a health and wellness company, resolving DNS propagation, SSL provisioning, and large-media Git failures to reach production.
- Migrating a 37-page WordPress site to static HTML with zero loss of live Google Ads and Google Analytics tracking, and recovered client domain control after the prior developer became unreachable.
- Designed a membership and dues payment flow for a medical association: multi-field applicant form, automated approval routing to the organization president, and payment handoff.

Open Source Contributor

September 2025 – October 2025

Checkmate (Server Monitoring Platform, 10.8k+ GitHub stars)

Remote

- Merged an escalated-notifications feature into a server monitoring platform with 10.8k+ GitHub stars, spanning React frontend UI and backend Firestore triggers with email dispatch.
- Iterated through maintainer code review and revision cycles to land the contribution upstream.

Projects

CleanVision: Egocentric Energy Auditing System | Python, YOLOv8, Google Gemini API, Meta Project Aria Gen 1

- Placed 3rd of 80+ teams at Knight Hacks (UCF) on a 2-person team, building a Python energy-audit pipeline that runs YOLOv8 appliance detection over room walkthroughs captured on Meta Project Aria Gen 1 smart glasses.
- Converted detected appliance counts into kWh and cost estimates, emitting a self-contained HTML report with Gemini vision-grounded efficiency recommendations.

E-Commerce Analytics Engine | C++, Hash Maps, Graph Traversal, Sorting Algorithms

- Indexed e-commerce transaction records into hash maps joining orders, products, and customers in constant time per lookup, then computed aggregate statistics across the joined collection.
- Generated product recommendations from an undirected co-purchase graph stored as an adjacency list of hash sets, using two-hop neighbor traversal ranked by shared-neighbor frequency.
- Benchmarked merge sort against quicksort on generated integer arrays to compare recursive sort performance.

The Pause Protocol: Mindfulness Intervention App | React Native, Expo, TypeScript, Firebase, Firestore

- Owned the backend and data layer for a 3-person Expo/React Native app (expo-router, TypeScript) that intercepts distracting apps via an iOS Shortcuts deep link, gating access behind a mindfulness quote and forced countdown.
- Implemented Firebase email authentication, per-user settings persistence with configurable cooldown length, and an admin-gated Firestore quote library with full create, edit, and delete.

Instagram Reel Analysis Pipeline | Python, yt-dlp, faster-whisper, Ubuntu (WSL2)

- Processed 800+ saved videos through a four-stage resumable Python pipeline built on yt-dlp and faster-whisper, with per-stage checkpointing to survive interruption mid-run.

Technical Skills

Languages: C++, Python, TypeScript, JavaScript, HTML/CSS, MATLAB

Frameworks & Tools: React Native, Expo, React, Next.js, Astro, Vite, Node.js, Git/GitHub, VS Code, npm, Ubuntu (WSL2)

ML & Data: YOLOv8, Google Gemini API, faster-whisper, Firebase/Firestore

Platforms & Deployment: Netlify, Firebase, Google Analytics, DNS/SSL configuration

Activities: Member, ACM at UF
